

RANBP1 Human

Description: RANBP1 Human Recombinant produced in E. coli is a single polypeptide chain containing 225 amino acids (1-201) and having a molecular mass of 25.8kDa. RANBP1 is fused to a 24 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques.

Catalog #: PRPS-1071

For research use only.

Synonyms: RAN binding protein 1, HTF9A, ran-specific GTPase-activating protein, RanBP1.

Source: E.coli.

Physical Appearance: Sterile Filtered colorless solution.

Amino Acid Sequence: MGSSHHHHHH SSGLVPRGSH MGSMAAAKD THEDHDTSTE
NTDESNHDPQ FEPIVSLPEQ EIKTLEEDEE ELFKMRALF RFASENDLPE WKERGTGDVK
LLKHKEKGAI RLLMRDKTL KICANHYITP MMELKPNAGS DRAWVWNTHA DFADECPKPE
LLAIRFLNAE NAQKFCTKFE ECRKEIEERE KKAGSGKNDH AEKVAEKLEA LSVKEETKED
AEEKQ

Purity: Greater than 95% as determined by SDS-PAGE.

Formulation:

The RANBP1 solution (1mg/1ml) contains 20mM Tris-HCl buffer (pH 8.0), 100mM NaCl, 1mM DTT and 10% glycerol.

Stability:

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.

Usage:

NeoBiolab's products are furnished for LABORATORY RESEARCH USE ONLY. The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals.

Introduction:

RANBP1 is a member of a family of proteins which bind Ran GTPase. Ran GTPase is vital for cell cycle control, mRNA processing, nuclear transport, mitotic spindle assembly, and postmitotic nuclear re-assembly and nuclear architecture maintenance. RANBP1 does not stimulate GTPase activity of RAN however RANBP1 does distinctly raise GTP hydrolysis by the RanGTPase-activating protein (RanGAP1). Additionally, RANBP1 operates as a negative regulator of RCC1 by inhibiting RCC1-stimulated guanine nucleotide release from RAN.
